TITLE : PREVIOUS CREDIT CARD, CARD SYSTEM AND CARD TERMINAL DEVICE

ABSTRACT : PURPOSE: To use an existing credit card as it is and to divide the amount of money which is used on a previous credit basis to plural cards by recording the balance obtained by subtracting the used amount from a previous credit frame at a recording part.

CONSTITUTION: The card system can use credit card 1, previous credit card 2, prepaid card 2-1 such as meal ticket, point card 2-2 where repayment points, etc., corresponding to the amount of used money are recorded, etc., and they can be read and written by the card terminal device 3. The credit card 1 has the recording part to which the previous credit frame after previous credit is given is moved within the range of the previous credit frame, and at the recording part, the balance obtained by subtracting the amount of used money from the previous credit frame is recorded without making a credit confirmation again at the time of utilization. Thus, the previous credit card 2 where the amount of usable money given credit within the credit frame of the credit card 1 is issued to eliminate the need to confirm the credit each time the card is used, thereby speeding up the processing at a totalization counter.
